NETWORK PASSWORD RESET SYSTEM

ABSTRACT

5   A method and implementing system are provided in which, a
web based password reset tool includes means for resetting
passwords for OS/2 user IDs. In an illustrated example, an
OS/2 environment is contacted using TCP/IP over NetBIOS
(TCPBEUI). NetBIOS packets are passed through routers into

10   the NetBIOS network. The user ID and new passwords are
issued and passed to the OS/2 server to be set. After the
OS/2 server sets the password, the new password will be sent
back to the password reset tool for access and/or display to
the user requesting the new password. The new password is

15   displayed through an email message or using another
application display area.
